Riley Morris

(647) 469-0777 • riley.morris@alumni.utoronto.ca • linkedin.com/in/riley1morris • riley-collab.github.io

Full-stack software engineer with 4 years of experience shipping React and TypeScript products, from enterprise SaaS used by 19,000+ people to production GenAI applications. I lead features end to end, mentor new hires and interns, and build AI agents and LLM pipelines that ship.

TECHNICAL SKILLS

Frontend: TypeScript, JavaScript, React, Next.js, Tailwind CSS, Material-UI, Shadcn, Redux Toolkit, React Query, Jotai
Backend: Node.js, NestJS, Python, FastAPI, SQL, Supabase, Prisma, Elasticsearch, Stripe, REST
Cloud, Infrastructure + Testing: AWS, Terraform, Vercel, GitHub Actions, Jest, Playwright
AI & LLMs: Claude API, Gemini, LLM pipelines, AI agents, MCP, GitHub Copilot (agent mode & coding agent), Cursor

PROFESSIONAL EXPERIENCE

Software Engineer | *Avanade (Microsoft Fabric UX)* May 2025 - Present

- Led development of several features on Microsoft Fabric UX, shipping 5 new React features to 19,000+ users
- Drove features end to end with designers, PMs and external dev teams, managing dependencies across 6 teams
- Mentored and onboarded new hires and interns on the codebase, review practices and delivery
- Built an AI agent with GitHub Copilot coding agent to autonomously resolve low-effort incidents
- Embedded GitHub Copilot into dev and non-dev workflows, automating 3 weekly tests (~4 hours saved per week)
- Owned on-call duties across feature switch deployments, incident triage and production error log monitoring

Software Engineer | *Flock - Contract* Jan 2025 - Apr 2025

- Built a referral management platform in React, Tailwind and ShadCN, with an embeddable referral component
- Built secure NestJS and Supabase APIs for real-time analytics, integrations and automated reward payouts

Software Engineer | *Sanofi (AI Center of Excellence)* Oct 2022 - Dec 2024

- Designed and built a GenAI app (React, Node.js) generating Clinical Study Reports, cutting time to market by 90%
- Led a refactor of front-end codebases onto an in-house component library, reducing development time by 20%
- Built a full stack feature (React, FastAPI) letting data scientists and ML engineers deploy AI models at scale
- Built internal search for 10,000+ employees, raising recall 15% with an Elasticsearch DisMax query
- Mentored and led interns, guiding their projects from scoping to delivery

Earlier | *Nference (SWE Intern), TMX Group, Virtu Financial (Analyst Intern)* 2019 - 2022

- Built a React + NLP search for medications in biomedical papers, with sub-ms trie queries over 1M+ entries

PROJECTS

itsRevTime | *Live weekly newsletter, itsrevtime.com* TypeScript, Next.js, Claude API, Vercel

- Built a pipeline that ranks car news from RSS, Google News and Reddit and has Claude draft each issue as HTML
- Links can't be hallucinated (Claude cites stories by id); a GitHub Action drafts issues for human approval

AI Food-Label Compliance Platform | *Contributor* NestJS, React Router, Supabase, Stripe

- Built pay-as-you-go Stripe billing in CAD, with signed webhooks proxied to a private API
- Built the team review workflow on top of AI regulatory findings: comments, "pass as is" decisions and label sign-off

EDUCATION

Bachelor of Applied Science, University of Toronto June 2022

Electrical & Computer Engineering, Minor in Business, Leadership & Communications Certificates
